

Commit a1b2c3d

Move Config.java into core package

utils/Config.java

→ **core/Config.java**

RENAMED

```
12 class Config {  
13     static int TIMEOUT  
        = 30;  
15 }
```

// renamed only → looks clean

ApiServer.java

(elsewhere — not touched)

```
1 import utils.Config;  
2  
3 class ApiServer {  
4     void start() {  
5         Config c =  
            Config.load();  
7     }  
8 }
```

⚠ **utils.Config no longer exists → compile error**
